

ENVIRONMENTAL COMMITTEE

Committee Mission Statement:

To connect the construction industry with environmental education, awareness, best practices, guidelines, and policies while encouraging and promoting a culture of environmental sustainability.

The 2016 Environmental Committee members are as follows:

Catherine Willson –

Goldman Sloan Nash & Haber (GSNH) LLP Committee Chair

Sandra Burnell	Revay and Associates Ltd.
Amandeep Deol	Enerlife Consulting Inc.
Peter Ferrante	Ferro Canada Inc.
Brian Grossman	Weston Forest Inc.
Jorden Lefler	EllisDon
Paul Lisanti	Waste Container Services Inc.
Marc McAree	Willms & Shier Environmental Lawyers LLP
Romeo Milano	Safetech Environmental Ltd.
Marc Milton	PCL
Sophia Sestito	EllisDon
Jeff Sokol	Regional Doors & Hardware
Suzana Fernandes	TCA
John Mollenhauer	TCA
Lenore Villeneuve	TCA - Committee Secretary

TCA Green Ambassador Program

TCA's Environmental Committee has launched a "Green Ambassador Program" profiling member companies that are making a sustainable environmental difference in the Construction Industry. Let us know what your company is doing and we could profile your company next – e-mail us at: communciations@tcaconnect.com

Scroll down for this month's TCA Green Ambassador profile:

Weston Forest is one of the largest distributors of forest products to the Construction industry in Canada. We have been a trusted environmentally conscious partner to our customers and suppliers since 1953.

We are proud to be one of the first companies in Canada certified under the Canadian Food Inspection Agency's Canadian Heat Treated Wood Products Certification Program, which is designed to safeguard the world's forests from invasive species.

As part of our green initiative, Weston has made the considerable effort to become certified by the Forest Stewardship Council (FSC). As such, we are our customer's go-to source for just-in-time service of FSC lumber and plywood to help them earn LEED credits. We are honoured to play a role in helping our customers build green projects.

In 2014, Weston Forest participated in a pilot project to buy lumber produced from City of Toronto Ash Trees which had been cut down due to an Emerald Ash Borer infestation. Crews contracted by the City cut down 13,000 ash trees. Once the logs got to their yard, the City was paying a contractor to grind them into woodchips, which costs \$8 a tonne. The contractor used some wood chips for mulch. Often the city pays another \$100 a tonne for haulers to take the excess chips to a landfill.

Weston Forest worked with a local sawmill who cut these trees in to planks, saving the City up to \$108 a tonne. Weston bought these planks as saleable lumber and helped repurpose these trees to our customers. Otherwise we would be using logs that are felled in the forest.

Participating in each of these projects reflects Weston Forest's longstanding commitment to sustainability.
